Health In Action

**Health In Action Community Pharmacy** was founded by Health In Action. We aim at promoting self-care and enhancing public awareness of medication use. The pharmacy is operated by registered pharmacists, and the major services of our pharmacy are summarised below.

## Community Pharmacy Management Service

Our pharmacists provide **individual consultation services** for the **eligible groups\***. The scope of the consultation includes:

- » Assessment of medications, including their **indications, side effects and potential interactions**
- » **Medication reconciliation**, from which we create a personalised drug list
- » Development of an individualised **health and medication management plan**

If you are interested, feel free to reach out to us by phone or come to our pharmacy

\*Eligible groups include patients who are 18 years of age or older, or their caregiver, and fulfil at least one of the criteria below. The patients eligible for the service should be:

- » Taking **5 or more** long-term medications,
- » Taking **high-risk medications**, such as blood thinners or drugs for diabetes, mood or nervous diseases, and/or
- » Having drug treatment **changed recently**, including recent hospital admissions and discharges, or starting new medications

# Minor Ailment Management Service

When you have any symptoms, you can seek help from our pharmacy. After an initial assessment by the pharmacist, she or he will:

- » Suggest you use **over-the-counter medications\***
- » Provide health-care advice
- » Refer you to the doctor if needed

\*Common conditions that can be managed by using over-the-counter medications include, but are not limited to: Dyspepsia, Heartburn, Flatulence, Constipation, and Diarrhoea

## Community Health Education Activities

A series of medications and community health education-related activities, including talks and exhibitions, are planned. The public is frequently reached with health-related messages and information via our social media. These activities raise public awareness of medication use and strengthen their self-care abilities.

We wish to collaborate with other social organisations and develop primary care networks; therefore, community pharmacy can play a more important role in promoting primary care.

## Multicultural Support

We also provide support for the multicultural community, which includes translation, training programmes, outreach health promotion activities, and resources. Eventually, we aim to promote public health awareness and knowledge, and enhance health equity, thereby building a healthy society.
